

[FILM SURFACE FINISHING SYSTEM]

Abstract

This invention provides a flexible film for providing a protective finish on a surface. The film may optionally include a bonding coat for attaching the film to the surface, at least one removable protective layer, and a release coating for facilitating the transfer of the film to the surface. Cured and crosslinked top coats may be applied over the films to enhance the durability of the underlying surface. These top coats may then be easily removed by peeling the underlying film away from the surface.
